AP HYDRAULIC FRONT REEL

The AP front reel is developed for the reeling and unreeling of hoses. The hose reel is driven hydraulically with dual-power drive and is equipped with a 3-point hitch. The reel is prepared for potential lighting.

Standard equipment

- Solid framework
- Chain wheels are mounted on the reel's wall instead of the reel axles
- Heavy duty chain drive
- Adjustment of the chain tension by hydro motor
- Dual-power drive

Options

- Lighting at the front or the back
- Hydraulic arm with parallelogram and heavy rollers
